### 4. [Microblowing Technique Reduces Skin Friction](#)

Microblowing Technique Demonstrated to Reduce Skin Friction One of the most challenging areas of research in aerodynamics is the reduction of skin friction, especially for turbulent flow. Reduced skin friction means less drag. For aircraft, less

### 5. [Drag](#)

Drag Pressure Drag occurs when the air flow separates from the surface. If you stick your palm out and swing it through the air - thumb towards ceiling and pinky closer to floor - (if your hand was a wing, you would be giving your hand a 90 degree angle)

[ldaps.ivv.nasa.gov](#)

### 6. [AE 3005](#)

IX. Boundary layer Profile Properties To the practicing engineer the velocity profile itself is of very little interest. The following parameters are more important. 1. Boundary Layer Thickness  $\delta$ : This is defined
